Feb. 16. 1876 —
March 5. 1877.

INDEX.

ABBOTT'S Ripton, railway accident, 65
Abbott on simultaneous ignition of mines, 330
Action of heat in magnetisation, on the, by L. Favé, 92; light of on the electrical behaviour of metals in water, 268
Actions at a distance, explanation of, 328
Amiot's M., review of the electrical apparatus employed in the working of the French railways, 262
Anglo American Telegraph Company, 48, 123
Anthony, electric light experiments, 312
Art, 17
Australia, telegraphic progress in, 320
Autokinetic telegraph, 241, 264, 287 311
Automatic discharger for atmospheric rods, 213

BAKERIAN lecture, by Sir Chas. Wheatstone, 10, 25, 40, 71, 89
Barrett, Prof., on magnetism and light, 301, 319
Barry's, J. W., railway appliances, (review) 128, 138
Beard, G. M., on the newly discovered force, 47
Becquerel, M., experimental researches on rotatory magnetic polarisation, 213
Beechey, F. S., on electro-telegraphy, (review) 287
Beetz, M., on anomalous data of the gold leaf electroscope, 250
Berthelot M., on the absorption of free nitrogen by the immediate principles of plants under influence of atmospheric electricity, 285
Betts, J. A., on torpedoes and torpedo warfare, 293, 304
Black drop, on the phenomenon of, 327
Blanc, M. le, report on Delachanal and Mermet's new spectro-electric tube or fulgurator, 285
Block signalling, 21, 33, 54, 69, 82 115, 129, 172, 208
Bochefontaine on some phenomena produced by faradisation of the grey cortex of the brain, 226
Boillot, M., on the production of electric effluves, 226
British Association, electricity at, 253
Brazilian Submarine Telegraph Company, 124

CABLE, Direct U. S., 111, 123, 125, 129
Cables, deep sea, 81
Cael, M., note on M. Ducrétet's rheotome with constant direction, 263
Caoutchouc, 152
Carving action of acids on various metals, 299
Central American Telegraph Company, 110
Charges taken by different lengths of cable, 195
Chemical actions produced by the discharges from an induction apparatus, 152
Christmas lectures at the Royal Institution, 27, 43, 62
Chromographs, on the use of the induction spark and electro-magnets in connection with electric, 163
Civil Engineers, the Institute of, 106, 123, 178
Clamond's thermo-electric battery, by Latimer Clark, C. E., 154
Clausius, R., new fundamental law of dynamics, 191
Collection of scientific apparatus, special loan, 153, 157, 169, 197, 255
Comets, and Geissler tubes, 313
Communications between light ships and the shore, 113; with light vessels, 128
Comparison of the batteries used in telegraphy, by M. Gaugain, 163, 317
Compliments of the season, 118
Constitution and magnetism of steel, on the, 194
Construction, of telegraphs, 17; of lightning protectors, 40
Correspondence, 16, 32, 64, 80, 112, 128, 139, 164, 180, 216, 263, 276, 287 310, 332
Correspondents, notices to, 16, 64, 80, 96, 112, 128, 140, 164, 180, 204, 228
Coquillon, M., on a process for determining hydro-carbons and especially fire-damp in mines, 257
Cuba Submarine Telegraph Company, 124
Curiosities of the wire, 270
Curve of tension of saturated water, on the, 328

DAMPING of oscillating magnetic needles with non-magnetic discs, on, 174
Danger from overhead telegraph wires, 96
Davis, H., & F. B. Rae's Handbook of electrical diagrams and connections, (review) 240
Day dreams, of a sleepless man, the, (review) 14
Days, R. E., exercises in electrical and magnetic measurement with answers, 179
Deep sea cables, 81
Dental invention, a new, 209
Deprez, Marcel, on the use of the induction spark and of electro-magnets in connection with electric chromographs, 163
Description, of a lightning protector especially adapted for ærial lines, 79; of railway construction, &c., (review), 128, 138
Development of static electricity, 314
Difference of potential in the insulated extremities of an open induction bobbin after rupture of the inducing current, 214
Dispersion of the planes of polarisation of luminous rays of different wave-lengths, 213
D'Infreville's duplex telegraph, 23
Direct Spanish Telegraph Company, 110, 124
Direct United Company's cable, 111, 123, 125, 129; recent breakages of, 66
Du Moncel, Count, Exposé des applications de l'electricité, (review) 227, 239; sixth note on electrical transmissions through the ground, 262; on stones as conductors, 268
Duplex arrangement (Koch's) 290
Dynamo-magnetic phenomenon, 316

EASTERN Telegraph Company and Messrs. Siemens Bros., 56
Effects, of stress upon the magnetism of soft iron, 32: of electricity in particles suspended in liquids, 154; of lightning on certain tree species, 193
Egoroff M., differential electro-actinometer, 203
Electric, battery, (Clamond's) 154; anemometer of Mr. Hardy, by M. Gillett, 134; lighting in France, 231; telegraph and lightning, 265; light, researches on, 291; lamp, new, 299; discharge in telegraph office, 312; pen, 312; repeaters for railway signals, 328

Electrical, measurement of very small intervals of time, science in foreign journals, 163, 191, 202, 213, 226, 249, 262, 274, 285, 299, 309, 327; currents through gliding friction, 320: transmissions through the ground, 259; phenomena of Venus' fly-trap, new researches on the, 258; science at the British Association, a summary of, 257; behaviour of metals in water, action of light on, 268; science at St. Petersburg, 286; testing, Handbook of, (review) 95; magnetic measurement with answers, exercises in, (review), 179; whale, on a, 96
Electricity, development of static, 314
Electricity of tension, chemical phenomena produced by, 327
Electro-chemical deposits of aluminium, &c., 309; discoveries, on some recent, 271
Electro, magnet, 27; telegraphy, (review) 287; magnetic action of moved electrified particles, 267
Electricity, as an executioner, 32, and railway travelling, 51; at the British Association, 253; new applications of, to organ building, 84
Etheric force, the, 61
Expansion, galvanic, 289
Exposé des application de l'electricité, (review) 227, 239

FACILITIES offered to the public in telegraphing, 229
Fall of a potential curve in a charged submarine cable, 131
Faraday and Wheatstone, 80
Favé, L., on the action of heat in magnetisation, 92
Firing time gun at Pernambuco, manner of, 102
Fleetwood, C., on underground telegraphs, 26
Force, the new, 29; the nature of the newly discovered, 46; the etheric, 61
Form of galvanic battery, a new, 244
Fracture in a submarine cable, method of determining the locality of a, 98
Friction, excitation of electricity by, 300; electric currents through gliding, 320
Fridblatt's, M., description of a new electro magnet system with iron bobbins, 227

GALVANIC expansion, 289; resistance, on the nature of, 266
Galvanised iron wire, test of, 31
Galvanometer for testing lightning conductors, 270
Gaugain, comparison of batteries, &c., 317; on influence of temperature on magnetism, 205; memoir on magnetism, 226
Gavey, J., on telegraph construction, 17
Geissler tubes and comets, 313
Gillett, M., on the electric anemometer of Mr. Hardy, 134
Globular lightning, M. Plantè on, 237
Gramme machine, the, 322
Grove's improved rheostat, 172
Great Northern Telegraph Company, 124
Guthrie F., Magnetism and electricity, (review) 12

HAGENBACH, M., physical investigation of the Gramme dynamo-electrical machine, 250
Handbook, of electrical testing, (review) 95; of electrical diagrams and connections, (review) 240
Hardy's electric anenometer, 134
Heat, action of, in magnetisation, 92
Helmholtz, M., report on experiments of Dr. Root on the penetration of platina with electrolytic gases, 238
Hess, M., on a new electric lighting instrument, 275
Hockin, C., on the proof of a formula given by Mr. Kempe, 220, 233
Hoskin's duplex telegraph, 45
Hottenroth, M., automatic transmission by the Hughes telegraph, 227
Hughes apparatus, latest improvements in, 310

IMPROVED rheostat, Grove's, 172
Improvements in quadruplex working, some of them being applicable to other purposes, 230
India rubber, gutta percha and telegraph works, 110
Influence of light upon the conductivity of crystalline selenium, on the, 15; of temperature on magnetism, 203
Indo-European Telegraph Company, 111
Invention of the Telephone, 148
Irreciprocal conduction of currents, 217
Iron rusting, 139
Instruments for electrical measurement, on Wheatstone's, 244

JASK howl, 95
Jabloschkoff, new electric lamp, 209
Journal of the Society of Telegraph Engineers, (review) 179

KEMPE, H. R., review of electrical testing, 95; on the proof of a formula given by, 220, 233; on a system of working by translation on a closed circuit, 39; on a method of determining the locality of a fracture in a submarine cable, 98

LAGARDE, M., modifications in the Marié Davy Battery, 227
Langdon, W., electric repeaters for railway signals, 328
Latimer Clark, with portrait, 205
Lecture, Bakerian, by Sir Chas. Wheatstone, 10, 25, 40, 71, 89
Lectures at the Royal Institution, by Prof. Tyndall, 27, 43, 62
Lessons in electricity at the Royal Institution (review) 310
Light, upon the conductivity of crystalline selenium, on the influence of, 15
Lightning, and the electric telegraph, 261; on some peculiarities of, 327
Lightning protectors, construction of, 40; especially adapted for ærial lines, description of, 79
Loan collection of scientific apparatus, special, 153, 157, 169, 197, 255
Lommel, M., on electrical dust figures in space, 250

MAGNETIC equivalent of heat, 69
Magnetism, and electricity, (review) 12; and constitution of steel, 194; on the surface of magnets, distribution of, 300; and light, on the points of contact between, 301, 319; influence of temperature on, 309
Magnets, circular motion produced by action of, 300; portative force of, 327
Manner of firing time-gun at Pernambuco, 102
Marez, M., photographic inscription of the indications of Lippman's electrometer, 226
Measurement, of the electro-motive force of induction, on, 171; of the electric resistance of liquids by means of the capillary electrometer, 210
Mediterranean Extension Telegraph, 109
Mercadier, M., on the electro diapason, 227
Meteorological Society, 44, 108
Method of determining the locality of a fracture in a submarine cable, 98
Military telegraphy, M. Trouve's system of, 184
Mineralli, A. von, on the thermo-electric conditions of various metals in melting and recooling, 191

Mines, simultaneous ignition of, 330
Monte Cavo, new observatory on, 327
Morel, M., on some modifications in the electric communications of the Meyer multiplex apparatus, 285
Mouton, M., on the phenomena of induction, 151
Moxon, the late Henry, 198
Municipal objections to overground lines in America, 112

NATURE, of the newly discovered force, 46; of thermo-electricity, 114; of zodiacal light, 217; of galvanic resistance, 211
Nebulous spirals, 20
New, force, the, 29; method of signalling on railway, (review) 59; postal telegraph regulations, 48; application of electricity to organ building, 84; continuous current magneto-electric machine, by Alfred Niandet, 100; Zealand cable, 116; dental invention, 209; form of galvanic battery, 244; researches on the electrical phenomena of Venus' fly-trap, 253; Zealand telegraphy, 277; fundamental law of electro dynamics, 191, 282; peroxide of manganese battery, by M. Leclanché, 213; experimental considerations on Mr. Crookes' radiometer, by M. Ledieu, 204
Neilson, H. on D. Infreville's, duplex telegraph, 23
Nerve, on the pneumogastric, &c., 327
Notes, 8, 23, 42, 57, 73, 86, 102, 117, 131, 145, 159, 176, 188, 199, 211, 224, 236, 247, 260, 272, 283, 296, 305, 323
Notices to correspondents, 16, 64, 80, 96, 112, 128, 140, 164, 180, 192, 204, 228

OAKUM pickings (review) 310
Oberbeck, M., passage of electricity through gases, 250
Ohm, 49
Optical composition of rectangular vibratory movements, 300
Organ building, a new application of electricity to, 84
Our telegraphic communications in case of war, 169
Overground and underground telegraphs, 97

PARLIAMENTARY intelligence, 111, 162
Particles suspended in liquids, effect of electricity on, 154
Patents, 215, 240, 252, 276, 288, 332
Pen, the electric, 312
Penetration of charges in insulating bodies fixed and in motion, 204
Perils of Australian telegraphy, 16
Phenomena of induction, on the, 157
Phonotelegraph, The, 192
Physical geography, or the terraqueous globe and its phenomena, (review) 30
Physical Society, 63, 93, 107, 121, 150, 162, 178, 192, 202
Planté, M. G., on globular lightning, 237; on nebulous spirals, 20; polar auroras, 190
Pneumatic system in Berlin, 246; telegraph, 163
Pope, F., on quadruplex telegraphy, 2
Portraits, Sir Charles Wheatstone with address, 1; Latimer Clark with biography, 205
Postal telegraph regulations, the new, 48; Postal telegraphs and the retrograde steps of the Treasury Committee, 30; Post office telegraphs, 67
Potential curve in a charged submarine cable, on the fall of a, 131
Preece, W. H., on a system of telegraphy, 6, 18, 35
Presidential oration, a, 241
Proceedings of Societies: Telegraph Engineers, 14, 44, 64, 75, 105, 119, 135, 149, 307; Royal Society, 63, 78, 94; Victoria Philosophical Institute, 109, 123, 151; Physical Society, 63, 93, 107, 121, 150, 162, 178, 192, 202, 296, 309, 326
Process for determining hydrocarbons and especially fire-damp in mines, on a, 237
Proof of a formula given by Mr. Kempe, 220, 233

QUADRUPLEX telegraphy, 2
Queries, 312

RADIOMETER and electricity, 296
Railway, travelling, electricity and, 51; accident at Abbot's Ripton, 65
Rapid method of determining the interior resistance of a battery, 204
Raupp, M., apparatus for immediate signalling of a diminution of pressure in a gas-pipe system, 275
Recent, breakages of Direct United States Company's cable, 66; electro-chemical discoveries, 271
Relation of electric conductivity of selenium to heat and light, 238; between capillary and electrical phenomena, 265
Renesson's electro-magnetic arrangement for stopping steam engines, 275
Repairing ships, 181
Report upon the Direct United States cable, 163
Researches on magnetic rotatory polarisation, 32
Reviews of, Magnetism and electricity, (by F. Guthrie) 12; the Postal telegraph and the retrograde steps of the Treasury committee, by W. Saunders, 30; Physical geography and the terraqueous and its phenomena, by W. D. Coley, 30; Telegraphy, by W. H. Preece and J. Sivewright, 31; a New method of signalling on railways, by D. Salomon, 59; Electrical and magnetic measurement with answers, by R. E. Day, 179; a Successful method of applying electricity to colliery signals, &c., by G. E. Smith, 179; Journal of the Society of Telegraph Engineers, 179; Electro-telegraphy, 287; Handbook of electrical testing, by H. R. Kempe, 95; Handbook of electrical diagrams and connections, by C. H. Davi. and F. B. Rae, 240; Exposé des applications de l'electricité, by Count Du Moncel, 227, 239; Oakum Pickings, by John Oakum, 310; Lessons in Electricity at the Royal Institution, by Prof. Tyndall, 310
Reynolds, Prof. Osborn, on the electro-magnet, 27; Rolls, E. T., on variation of ships' compasses, 33
Royal, Institution, 106, 136; Society, proceedings of, 63, 78, 94; Institution, Christmas lectures at the, 27, 43, 62
Russian telegraphs in 1874, 315
Rusting of iron, 139

SABINE, R., on electrical measurement of very small intervals of time, 141
Saint-Edmé, E., on construction of lightning protectors, 40
Saunders, W., the postal telegraphs, and the retrograde steps of the treasury committee, (review) 30
Science, 2
Siemens Bros. and the Eastern Telegraph Companies, 56
Siemens, Werner, on the influence of light upon the conductivity of crystalline-selenium, 15; contributions to the theory of submerging and testing submarine telegraphs, 75; on the relation of electric conductivity of selenium to heat and light, 283
Silow, M., on the constant of dielectricity of liquids, 250
Smith, G. H., successful method of applying electricity to colliery signals, &c., 179.
Special loan collection of scientific apparatus, 153, 157, 169, 197, 255

GRAMME'S MAGNETO-ELECTRIC COMPANY,

LIMITED,

7, QUEEN VICTORIA STREET,

LONDON, E.C.

CHARLES OWEN,

10 years with John Browning, of the Minories; Nephew and formerly Manager to the late Henry Barrow of Oxendon Street, Haymarket; and Manager to the late London Spectroscope Company,

WHOLESALE MANUFACTURING OPTICIAN

To Her Majesty's Government, the Arctic Expedition, &c.

EVERY DESCRIPTION OF ELECTRICAL BELLS AND APPARATUS.

283, STRAND, LONDON, OPPOSITE NORFOLK STREET.

Telegraph Engineer and Contractor.—ARTHUR H. W. RADCLIFFE, 7, Union Street, Birmingham.—Private Lines of Telegraph Erected; Merchants Supplied with Instruments, Batteries, Tools, and Stores of every Description.

TO INVENTORS.

Messrs. BREWER and JENSEN, British, Foreign and Colonial Patent Agents, give prompt personal attention to all matters entrusted to them.—Office for Patents, 33, Chancery Lane, W.C. Established 1844.

PATENTS. PATENTS.

ROBERTSON, BROMAN and Co., (established 30 years) continue to obtain Patents for Inventions. Pamphlet, containing special advice, gratis or by post. 166, Fleet Street, London.

NOTICE.—Messrs. O. and F. H. VARLEY Telegraph Engineers and Contractors, Manufacturers of Large Induction Coils and all Electrical Apparatus, request all communications to be addressed to the Works during the Re-Building of 12, Poultry, for City Improvements.—Mildmay Park Works, Mildmay Avenue, Stoke Newington, N.

Just published, in crown 8vo., price 8s.

ELECTRICITY. ITS THEORY, SOURCES, AND APPLICATIONS. By JOHN T. SPRAGUE, Author of Electro-Deposition of Metals. With 91 Woodcuts and 30 Valuable Tables.

London: E. and F. N. SPON, 48, Charing Cross.

TEXT BOOKS OF SCIENCE.

On Jan. 6, in small 8vo. with Woodcuts, price 3s. 6d., cloth.

TELEGRAPHY. By W. H. PREECE, C.E., Divisional Engineer, P.O. Telegraphs; and J. SIVEWRIGHT, M.A., Superintendent (Engineering Department) P.O. Telegraphs. Forming one of the Series of Text Books of Science, Mechanical and Physical, edited by C. W. MERRIFIELD, F.R.S.

London: LONGMANS & CO.

BLOCK TELEGRAPHS.—TYER and Co. (late Tyer and Norman), Mechanical and Electrical Telegraph Engineers and Contractors, beg to inform Railway Managers, Engineers, Telegraph Superintendents, and others that, in consequence of the increasing demand for the Self-magnetising Block Instruments, they have secured New and more Commodious Premises, situated No. 4, Old Street, Finsbury (two minutes' from Aldersgate Street Station), where they are now prepared to supply their Improved apparatus upon short notice.—Offices and Works, No. 4, Old Street, Goswell Road, Finsbury.

H. M. CAPNER, Manufacturer of Electrical-Galvanic, and Philosophical Apparatus of every Description.—3a, Northampton Square, Clerkenwell, E.C.

MESSRS.

H. A. HARBOROW & H. SPAGNOLETTI,

Electric Telegraph Engineers,

CONTRACTORS, AND MANUFACTURERS,

4, Circus Street, Marylebone, W.

Makers of Block Instruments, Single and Double Needle Instruments, Coils for same with Induced Needles. Lines constructed and maintained. For foreign lines and hot climates. H. and H. S. having for a number of years made C. E. Spagnoletti's Induced Coils can specially recommend them as less liable to be affected by lightning or other atmospheric changes than any kind made. Makers of the Spagnoletti and Partridge Electrical Tell-tale Clocks for Lunatic Asylums and other large establishments. The S. and P. Train Recorder. C. E. S.'s Self-acting Electrical Semaphore. C. E. S.'s Repeaters for Semaphores, Lamps, &c. Batteries of every description. Electric Bells, Indicators, Thief and Fire Alarms for private houses, banks, hotels, warehouses, &c., &c. Lightning Conductors. All kinds of Electrical Mining Apparatus. H. and H. S. draw attention to their Bells, &c., especially adapted for mines. Models made. Experiments carried out.—4, Circus Street, Marylebone, London, W.

The Journal of Metals, Manufacture, and Science.

"IRON."

(With which is incorporated *The Mechanics' Magazine*, Established 1823),

Is the Organ of the Metals, Coal, and Manufacturing Trades.

The following new features have been introduced into "IRON":—Price List of Birmingham and District and Sheffield Manufactured Hardware Goods.—Articles on the Manufacture of Iron and other Metals.—Articles on Trades' Unionism, or relations between Capital and Labour.—Descriptive Notices of Iron Founderies, Manufactories, &c. &c.—Trade Reports from all the Centres of Production of Metals and Hardware in Great Britain.—Reports of the State of the Metal and Hardware Trades in Belgium, France, Spain, Germany, Austria, Russia, Sweden, America, Australia, China, Japan, India, &c.

Terms of Subscription.—Single copies, price Sixpence; annually, paid in advance, including postage to all parts of the United Kingdom, 28s. 6d.—Cheques and Post-office Orders to be made payable to Mr. W. J. Rusby and to be crossed London and County Bank. Offices of "Iron," 12, Fetter Lane, Fleet Street, London, E.C., facing the Record Office.
